- Distillates (petroleum), hydrotreated light : oral; rat(male/female); 90 days; The study LOAEL for systemic effects is 1500 mg/kg/day and the NOAEL for systemic effects is 750 mg/kg/day, based on reduced body weight in dams and in pups. The LOAEL for adult males rats exposed to JP-8 orally was 750 mg/kg/day due to changes in clinical pathology, body weight, organ weights and the same irritation seen in female rats. The reproduction NOAEL was 3000 and 1500 mg/kg/day in males and females, respectively. (OECD TG 408, GLP) (read across: JP-8 jet fuel) (ECHA)
- inhalation; rat(male/female); 90 days; 0, 500, or 1000 mg/m³; Male rats developed hydrocarbon-induced nephropathy and decreased body weight. Therefore, the LOAEL in male rats is 500 mg/m³. There were no significant treatment-related effects in female rats; therefore, the NOAEL in female rats is greater than or equal to 1000 mg/m³. However, effects seen in male rats were due to alpha-2u globulin-mediated nephropathy, and, as such, are not relevant to human exposure. (OECD TG 413) (read across: JP-8 jet fuel) (ECHA)
